Empathy Map

Date	29 September 2026
Team ID	SWTID-2026-6382
Project Name	Edu Genie – Google Gemini Powered Learning Assistant
Team Size	3
Team Leader	Padmini P
Team Members	Nithya Sri A; Pritha S
Maximum Marks	4 Marks

Empathy Map

Create an empathy map to understand the primary customer/user from four perspectives — what they Say, Think, Do, and Feel — in relation to the academic-support problem addressed by EduGenie.

SAYS	THINKS
• “I need quick answers when I am studying.” • “I want explanations in simple language.” • “It is difficult to search through many academic materials.” • “I want help based on my own academic information.”	• How can I understand a topic without waiting for someone to explain it? • Can I get reliable academic guidance in one place? • Can my uploaded academic information be organized automatically? • Will the assistant save me time during study?
DOES	FEELS
• Uses an online learning platform or chatbot for questions. • Uploads academic/result documents when needed. • Checks academic information and learning activity. • Returns to the assistant for follow-up questions and explanations.	• Frustrated when answers are difficult to find. • Curious and motivated to learn. • Concerned about academic performance. • Relieved when guidance is quick, clear and personalized.

PERSONA

Name / Role	Student learner / college student
-------------	-----------------------------------

Primary Need	Fast, understandable and personalized academic support with convenient access to academic information.
Key Pain Point	Time-consuming searching, difficulty getting immediate clarification, and scattered academic information.

Empathy Insight: The student needs a single, easy-to-use platform that can answer academic questions conversationally while connecting relevant academic information and reducing the effort required to find support.
